

3 Hour Workshops

Operations Dashboard and Web App Builder Using ArcGIS

Duration: 1 Day (8 Hours)

Efficiently monitor real time data feeds and learn to create web apps.

In this course, you will bring together a common view of the systems and resources you manage. You will learn how to monitor real-time data feeds for large-scale events or day-to-day operations on your desktop or tablet device. You will create focused executive dashboards that integrate maps, charts, and graphs. Using the Dashboard app, you can create and manage an operations view that can be shared and used by others within your ArcGIS organization. Lastly you will learn to build your own apps using the Web AppBuilder for ArcGIS user interface (UI), which provides flexibility for creating web apps that meet your organizational requirements.

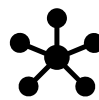

Goals

Create a custom web map with operational layers.

Create an operational view & an operations dashboard.

Create a simple app using web app builder

Create an app using infographics.

Who should attend?

GIS Professionals

Suggestion

Completion of **ArcGIS 4 Sharing GIS Content on the Web** or equivalent knowledge is recommended.

Software

Esri will provide the following software to use during class:

- **ArcGIS Online**
- **Operations Dashboard for ArcGIS**
-
