## Putting ArcGIS to Use Across Your Organization

Duration: 3 Days (24 Hours)

**Increase productivity, gain deeper insights, make more informed decisions.**

Get a comprehensive introduction to ArcGIS platform components and capabilities. In this course, you explore ArcGIS apps used for mapping and visualization, data collection and management, spatial analytics, and collaboration and sharing. Discover how the ArcGIS platform helps organizations address common business challenges and apply location-based insights to streamline operations and improve decision making.

### Goals

**Map** and analyze business data using ArcGIS apps and tools.

**Create** and share data, web maps, and web apps using an ArcGIS portal.

**Streamline** field data collection workflows.

**Configure** web maps and dashboards to monitor field operations in real time.

### Who should attend?

**GIS analysts    GIS Specialists    Managers    System Administrators**

#### Suggestion

Experience working with Microsoft Excel tables and other Windows-based software for file management and web browsing is required.

Some familiarity with GIS concepts may be helpful. For those new to GIS, completion of the free web course **Getting Started with GIS** is recommended but not required.

#### Software

Esri will provide the following software to use during class:

- **ArcGIS Pro 2.1 (Basic, Standard or Advanced)**
- **ArcGIS Online**
- **ArcGIS Maps for Office**
- **Collector for ArcGIS**
- **Operations Dashboard for ArcGIS)**
