

3 Hour Workshops

Working with an Enterprise Geodatabase in ArcGIS Pro

Duration: 3 Hours

Organize GIS data with geodatabase

Support your organisation's data management by successfully creating multiuser geodatabases. This workshop introduces you to managing an enterprise geodatabase, containing your organization's critical geographic data assets, in ArcGIS Pro. You will learn how to work with an enterprise geodatabase from the perspective of a GIS administrator, managing users and data.

Goals

Create and connect to an enterprise geodatabase in ArcGIS Pro.

Set up user roles and permissions to secure your organisation's data.

Apply best practices to share and promote your story

Who should attend?

GIS administrators

Specialists

Analysts

Suggestion

Completion of **Deploying and Maintaining a Multiuser Geodatabase** or **Getting Started with the Geodatabase** will be helpful but is not required

Software

Esri will provide the following software to use during class:

- ArcGIS Pro
- PostgreSQL
